

BUCKETS

Mantovanibenne®

BUCKETS

With more than 55 years of experience in manufacturing buckets, the MBI quality level is unrivalled across the world. The company has developed a wide range of specific buckets suitable for specialized jobs. Besides our standard bucket range, we can offer custom-made products to fulfil precise needs.

DIGGING BUCKETS

NGP General Purpose Bucket

High capacity bucket for medium to light soil excavation and loading.
Available from 6 to 38 tons excavators.

NHD Heavy Duty Bucket

Reinforced bucket for rock and demolition debris handling and loading.
Available from 6 to 90 tons excavators.

RO Rock Bucket

Extremely reinforced bucket for rocky and very compact soil excavation. It is designed to improve bucket maneuverability and performance.
Available from 6 to 90 tons excavators.

BG Skeleton Bucket

The bucket to be used for material separation or rock selection from water. Its skeleton structure is specifically designed according to customer's requirements.
Available from 9 to 38 tons excavators.

HANDLING BUCKETS

BC Carrara Bucket

Developed to handle large rock boulders. Its body is heavily reinforced to face the heavy duty work and the particular shape enables good handling precision. Its tapered shape with long delta blade makes easier the loading of rocky blocks. It is also the ideal bucket for river banks maintenance and construction.
Available from 18 to 65 tons excavators.

BV Serpentino Bucket

Specifically developed for marble blocks handling within quarries. Its particular shape allows the user to perform heavy-duty tasks as ripping and loading large marble boulders.
Available from 35 to 65 tons excavators.

DS Ripper Tooth

The specific tool for ground breaking and compact surface loosening. Its other primary task is to rip rocky blocks to be extracted from the quarry.
Available from 9 to 50 tons excavators.

DITCH CLEANING BUCKETS

BS Ditch Cleaning Bucket

Designed for slopes construction and maintenance, it can be also used to create draining canals and banks. When equipped with a blade, it is used for road maintenance or mounted on snowplow.
Available from 9 to 38 tons excavators.

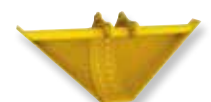

BSG Long Radius Ditch Cleaning Bucket

Its higher capacity and reinforced structure also allow digging operation, apart from the channel construction and cleaning duties for which it is designed.
Available from 9 to 50 tons excavators.

OP Side-Tilt Ditch Cleaning Bucket

With the possibility to tilt the bucket in either directions with a maximum angle of 45°, it is mainly used for river banks construction and maintenance, but it is also utilized in many other duties involving inclined surfaces.
Available from 9 to 38 tons excavators.

BT Trapezoidal Bucket

Specifically designed to dig draining and watering canals. Thanks to its oblique sides, it speeds up the ditch digging process by shaping the canal with a single movement.
Available from 9 to 38 tons excavators.
